

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions,  
and listings, of claims in the application:

LISTING OF CLAIMS:

1-10. (canceled)

11-15. (canceled)

16. (new) A production installation for utilizing wave energy, said production installation comprising:

at least two production units connected in series or parallel to each other,

a water mass (V) of a water basin adapted to actuate said production units or their parts, and

transfer equipment to transfer energy from said production units,

wherein:

(i) said production units transform kinetic energy of reciprocating movement of the water mass into electric energy, said electric energy is transferred by wire or cable to a point of application,

(ii) each said production unit is attached directly or indirectly to the bottom (P) of the water basin at an intermediate water region (B) to a depth deeper than the wave

breaking line, approximately in an area where a ratio of the depth of the water basin (H) to the wavelength (L) is in a range of 1/20 to 1/2,

(iii) each said production unit is completely submerged under the surface of the water, and

(iv) at least a part or all of said transfer equipment is immovably attached to one or more bases of said production installation at the bottom of the water basin.

**17. (new)** The production installation of claim 16, wherein said production installation is attached by way of said one or more bases to the bottom (P) of the water basin.

**18. (new)** The production installation of claim 16, wherein said one or more bases have fastening equipment for attaching to said production units.

**19. (new)** The production installation of claim 17, wherein said one or more bases have fastening equipment for attaching to said production units.

**20. (new)** The production installation of claim 16, wherein at said point of application of the electric energy there is an electric line above the surface of the water basin in which

the electric energy is transferred to another point of application.

21. (new) The production installation of claim 16, wherein said production units are attached to the bottom (P) of the water basin so they are totally located at a depth where movement of the water mass is substantially reciprocating or elliptic.

22. (new) The production installation of claim 17, wherein said production units are attached to the bottom (P) of the water basin so they are totally located at a depth where movement of the water mass is substantially reciprocating or elliptic.

23. (new) The production installation of claim 18, wherein said production units are attached to the bottom (P) of the water basin so they are totally located at a depth where movement of the water mass is substantially reciprocating or elliptic.

24. (new) The production installation of claim 19, wherein said production units are attached to the bottom (P) of the water basin so they are totally located at a depth where

movement of the water mass is substantially reciprocating or elliptic.

25. (new) The production installation of claim 20, wherein said production units are attached to the bottom (P) of the water basin so they are totally located at a depth where movement of the water mass is substantially reciprocating or elliptic.
